Sixfold social assets — Ridge, ember single colour

Profile marks and banners for Facebook, Nextdoor and Google Business Profile. This page is the proof: every asset shown at the size it will actually be seen at, and every banner shown under the crop it will actually get.

Profile mark at real display sizes

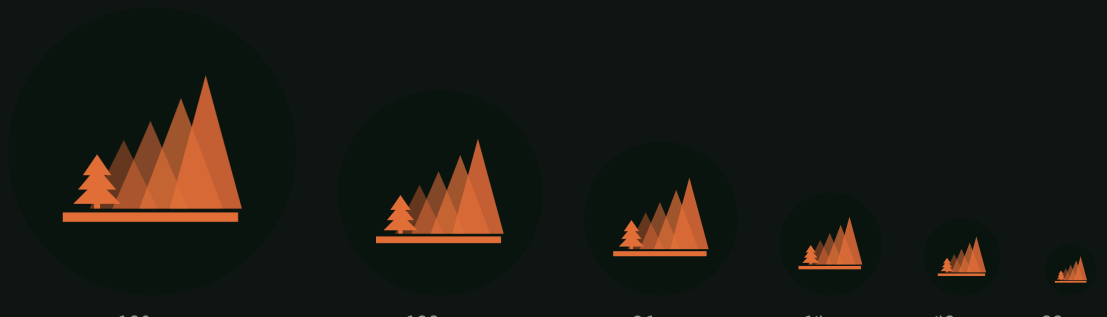

All three platforms crop the avatar to a circle. The large sizes are what you upload; the small ones are what a neighbour actually sees next to a comment. The roots stop reading below roughly 96px — which is why there is a crest-only variant underneath.

FULL MARK, WITH ROOTS — `SIXFOLD-PROFILE-EMBER-1024.PNG`

180 px 128 px 96 px 64 px 48 px 32 px

CREST ONLY, NO ROOTS — `SIXFOLD-PROFILE-EMBER-SMALL-512.PNG`

SQUARE CROP, AND THE LIGHT-GROUND ALTERNATE

Square · Google may show it uncropped Ember on Bone · circle Ember on Bone · square 48 px

Banner, and what each platform will cut off

The dashed band is what survives a narrower crop. Facebook shows a page cover wider on desktop than on a phone and takes the difference off the sides; Nextdoor and Google crop to their own frames. Nothing that matters is allowed outside the band.

Which file goes where

PLATFORM	SLOT	FILE	WHERE THE SIZE CAME FROM
Google Business Profile	Logo	`sixfold-profile-ember-720.png`	Verified — Google documents 720×720 recommended, 250×250 minimum, JPG or PNG, 10 KB–5 MB
	Cover photo	`sixfold-banner-16x9-1024x576.png`	Google publishes no cover aspect ratio — only the 720×720 figure above. 16:9 is a working choice, not a documented spec
Facebook page	Profile	`sixfold-profile-ember-1024.png`	Meta's help centre refuses automated requests. 1024 square clears every plausible minimum
	Cover	`sixfold-banner-facebook-1640x624.png`	2.63:1 is the long-standing page-cover proportion, not confirmed first-party. Check the upload dialog
Nextdoor	Profile	`sixfold-profile-ember-1024.png`	Nextdoor publishes no image specs. Square, oversized, safe
	Cover	`sixfold-banner-16x9-1920x1080.png`	16:9 as the safe general ratio. Confirm in the page editor
