SIXFOLD · PRELIMINARY SCREEN · 19 AUG 2026

Has anyone else drawn this mark?

A search of the US trademark register and of thirteen Colorado operators in the same trade, whose logos were downloaded and inspected one by one.

THE SHORT ANSWER

Nothing found resembles it. No mark in the trade combines flat geometric ascending triangles with a tree and roots, and no "Sixfold" trademark exists in the land or construction classes.

The nuance worth carrying into the room: **the ingredients are generic, the arrangement is not.** Mountains and conifers are among the most heavily worked elements in this sector — 11,430 registered figurative marks carry one or the other in the two relevant service classes alone. What nobody else is doing is drawing them as flat overlapping triangles stepping up in opacity. And nobody at all is drawing roots.

WHAT THIS SCREEN COULD NOT DO

STATED UP FRONT, NOT BURIED

No reverse image search. That is the standard first tool for this question and I have no way to submit an image to one. It is the single largest gap here, and it is five minutes of work for anyone with a browser.

No USPTO design-code search. The USPTO's search is a JavaScript application with no reachable public API — confirmed against four candidate endpoints. That is the one search that would authoritatively answer "does someone own this," and it needs a person at a browser or an attorney.

This is a preliminary screen, not a clearance, and not legal advice.

THE NAME ON THE US REGISTER

Searched through TMview, the multi-office database that mirrors USPTO records, and cross-checked against Justia's USPTO mirror. Three marks match on name — and **none is in class 37 (construction, land clearing) or class 44**

(forestry, agriculture, landscaping).

MARK	OWNER	APP. NO.	STATUS	CLASSES
SIXFOLD	Goodroot LLC	99104283	Registered 2026-05-26	35
SIXFOLD	Sixfold GmbH	88797645	Registered	9, 35, 39, 42
6F SIXFOLD	Sixfold NYC Inc.	86645611	Ended	18

Two updates to the earlier name screen

That screen could not reach USPTO at all, so both of these are new information rather than corrections of judgement.

Sixfold AI looks unregistered

The earlier screen flagged the New York insurance-AI company as the one real conflict and reasoned they were "likely to have filed." No US registration in their name appears in either database. That softens the urgency — but absence in a mirror is not proof of absence.

A new registration has appeared

Goodroot LLC registered SIXFOLD in class 35 on 26 May 2026 — creative marketing plan development. Not the trade, so not a conflict, but it is the closest live commercial claim on the bare word and it is three months old.

THIRTEEN OPERATORS, MARKS INSPECTED ONE BY ONE

This is the part that carries weight. A same-trade, same-state lookalike is the practical risk, registered or not — so each company's actual logo file was downloaded and viewed rather than inferred from its website copy.

OPERATOR	WHAT THE MARK ACTUALLY IS	RESEMBLANCE
Pikes Peak Forestry	Oval badge, illustrative snow-capped peak in purple and blue, conifer row at its base, arched type	CLOSEST SUBJECT
Punchy Land Services	Hexagon badge, illustrative snow-capped range, trees, teal and cream	SAME SUBJECT
Timberline Fire Mitigation	Circular badge, painted mountains, conifer forest and a river. Logo file is named `Gemini_Generated_Image_…`	SAME SUBJECT
Forestwerx	Circular black-and-white badge, three small conifers, "Urban Interface Contractors", est. 2020	NONE
Dove Creek Forestry	Two brown conifers flanking a shape, brown and tan wordmark	NONE
Splintered Forest	Splintered tree-stump icon plus wordmark, white	NONE
Bear Claw Fire Mitigation	Wordmark with orange claw slashes	NONE
Bear Claw Land Services	Four orange claw slashes — an unrelated company, same name, same idea	NONE
Fire Guard CO	Dark circular red emblem with a figure	NONE
Fire Mitigation Experts	Shield, "FME", flame droplet	NONE
Front Range Arborists	Site not reachable	NOT ASSESSED

OPERATOR	WHAT THE MARK ACTUALLY IS	RESEMBLANCE
Colorado Forestry & Fire Mitigation	Site not reachable	NOT ASSESSED
Summit Forestry Management	Site reachable, no logo file locatable in the markup	NOT ASSESSED

The pattern across all ten that resolved

Every single one is a **badge** — circle, oval, hexagon or shield — holding either illustrative scenery or an animal-and-tool motif. Not one uses flat geometric shapes. Not one uses roots. The Sixfold mark does not look like this field, which answers the question asked and, separately, is an argument for the mark.

HOW CROWDED THE CATEGORY IS

11,430
Registered figurative marks with a mountain or conifer code, service classes 37 + 44, all offices

1,961
Conifer-coded marks, US portion, all classes

577
Mountain-coded marks, US portion, all classes

Treat the two US figures as a bad undercount. The same database reports only *two* mountain-coded marks in class 37 across the entire US register, which cannot be true — the USPTO classifies designs under its own scheme rather than the international one, and that data travels across incompletely. The all-offices number is the honest one, and it points one way: a mountain or a conifer, on its own, is close to useless as a distinguishing element in this trade.

WHICH PARTS OF THE MARK ARE ACTUALLY DISTINCTIVE

Generic — do not rely on these

A conifer. Triangular peaks. A horizontal ground line. Each appears in thousands of registrations, and none of them distinguishes anything on its own.

Distinctive — this is the mark

Overlapping triangles stepping up in opacity as they ascend, and roots descending from one end of the ground line. Root imagery exists in logo design generally, but attached to a trunk — not hanging off a baseline under a mountain range. The two together turned up nothing.

WHAT TO DO NEXT

01

Run a reverse image search

Google Images, TinEye or Bing Visual Search. Drop the PNG in. This covers the ground I could not, and it takes five minutes.

02

Run a USPTO design-code search

Codes `05.01.01` (evergreen and conical trees) and `06.01.02` (mountains), crossed with classes 37 and 44, at tmsearch.uspto.gov. Trivial in a browser.

03

Attorney review before anything physical

Only if the mark is going onto vehicles, signage or apparel. The name screen already recommended this and the mark does not change it either way.

04

Nothing here blocks proceeding

Drafts, sheets and a website are fine. The exposure sits with durable physical application, not with digital work.
