Doors on the way

Group 3: 223 new towns across the rest of Colorado, being measured tonight

8

Apps and sites updated

Sixfold 365, five editions, the Traverse website (still private) and the 365 website; every upload checked

7

Waiting on you

Listed at the bottom

Sixfold 365 app 9

Reschedule + deposit	LIVE "Change or send again" on a booking with no signature and no deposit now reopens it: the old job comes off the board, the new day is held, and the new form asks for a deposit. Jen rebooked Roy this way (Sat 31 Oct, 12 to 2). Bookings with a deposit keep their day.
Crew notes	LIVE A job's notes now take 1,000 characters (was 300), after you hit the limit on Alberto's job.
Job photos	LIVE Jen opens and adds photos on the jobs she manages.
My stats	LIVE On your sign-in it shows your pipeline, not doors: leads, quoted, jobs landed, sold, rates and what's still open. It counts only your own leads (the website, and Facebook from 26 Oct to 27 Oct 5 pm), so the imports you ran for Jen are left out: 15 leads, 3 jobs. Brandon and the other admins keep the door stats.
Side menu	LIVE On a computer the menu scrolls by itself instead of squeezing under the account button, and My stats is in it.
Matt's job	FIXED His Won button hadn't saved, so it was set by hand: $359 front yard only, a job with Brad today 12 to 2, unpaid.
Ad spend	LIVE Tonight's Meta figures are in Stats: Instant Form ad $972.63 for 64 leads, Messenger ad $1,265.38 for 103 conversations, the first form ad $169.28 for 21 leads; $2,407.29 in all. Both running ads now have an $81 daily limit. The 8 pm email went at 8:00, before these arrived, so it carried the 28 Oct figures.
Randall's lead	FIXED A lead you passed on with Send to is the new owner's: Randall Carrera came off your pipeline and stays in Jen's.
Alberto	FIXED The email from his 20 Oct website lead was copied onto his customer record. His duplicate website lead is still open.

Doors and data 7

New-owner flags	LIVE Doors were wrongly marked "new owner" because the same address in two towns shared one history. Fixed at the source: Sixfold went from 1,278 flags to 4 real ones, each edition from 1,314 to 4. None of those doors had marks, notes or leads.
Group 2 measuring	LIVE Lawn, trees, roof and sun for the 43 Larimer, Mesa and Pueblo towns went up on all six apps at 4:42 am, and the close-up roof photos by 6:30 am. That's ahead of Friday.
Roof material	LIVE Roofing and Solar. The diagnosis: Group 1's files never reached the cloud machine, and Boulder and Weld names weren't matched. You said re-run it: Greeley 0 to 20,054 roofs, Longmont 175 to 13,759; 62 towns updated. "Probably asphalt" for the 39 towns with no county records stays off.
Hail and wind	LIVE Roofing. Five years of radar hail days (October 2021 to now) filled in statewide, so every town now has storm history. Hail days went from 66 to 115.
Lawn figures	LIVE Checked against 19 hand-measured lots, the newer lawn reading misses by 24% on a typical lot, against 65% for the old one; open lots read a bit low. A rule that wrongly paired neighbours as one "shared lot" is fixed, so 84,834 cards in 165 towns now show the newer figure, on Sixfold and all five editions.
Group 3	RUNNING The rest of Colorado. Counted: 223 new towns, 143,368 doors, plus 777 added to towns we already have. You said go, so the measuring started on the cloud machine and the results upload by themselves.
13 counties	LATER No statewide source covers them (Fremont, Chaffee, Otero and others, about 51,500 houses). Listed for later; Chaffee and Otero need the county's permission.

Traverse editions 9

Roles	LIVE Setter and Technician join Admin, Manager, Office and Sales rep, named for each trade (Roofing: Setter, Sales rep, Production crew). The server enforces what each role may do, and managers set their team's goals.
Seats	LIVE Every plan includes one admin free. Going over is never blocked, and Traverse gets one email when an install does. Your own super sign-in no longer counts as a seat (a Solo customer showed over its seats on day one).
Devices	LIVE One phone, one tablet and one computer per sign-in.
Terms	LIVE Terms of Use and Privacy at sign-in (admins also get the Subscription Agreement), and each "I agree" is recorded.
Setup › Email	LIVE A company connects its own Gmail, Outlook or other mailbox. A test email has to go before it's saved. It sends the signed agreement copy and receipts, each with wording they can edit.
Ways to pay	LIVE Venmo, Cash App, PayPal, Zelle or the company's own link, shown on the quote, the signing form and the job's balance.
Import	LIVE Customers (with their plans), leads (a Facebook file is recognised) and past work, with a preview, duplicate matching and Undo for each import.
Your costs	BUILT, OFF Prices worked out from the company's own labour, materials, overhead and margin. Only your super sign-in sees it until you've tried it.
One subscription	LIVE A company can't end up with two Stripe subscriptions. If a second one appears, you get an email.

Traverse editions, tonight 8

Billing	LIVE On in all five editions (it was Roofing only). Checked without a charge: each edition's Stripe link takes a signed test and refuses a bad one, and all 16 prices per edition are live. A real test checkout now charges the card, because the trial was replaced by the money-back guarantee on 27 Oct.
New movers	LIVE Every edition: "Sold Aug 2026" from the county's own sale record, a Sold tag on recent sales and a "Sold in the last 12 months" filter. 837,000 of 1,049,000 homes in 12 counties. Quit claims, foreclosures, family transfers and sales under $1,000 are skipped. Pueblo and Teller not yet.
Pest house facts	LIVE Basement and how much is finished, walk-out, crawl space or slab, stories, walls, year built: 755,000 homes. Arapahoe, Douglas and Mesa don't publish basements.
Security lot facts	LIVE Corner lot, alley, dead end or cul-de-sac, nearest home, open space and water behind the house, with four new filters: 573,000 homes have at least one. Corner lots matched real lot lines 87% of the time. "Road behind the lot" was right only half the time, so it's hidden.
Solar estimate	LIVE "About 32.8 kW fits, around 45,100 kWh a year", from our laser-scan roof facing, slope and shade and NREL's federal sun data for the area. Denver checks out at about 1,600 kWh per kW. 674,000 homes. The tree-shade cut is our assumption and says so.
Permits + roof age	LIVE Solar: "Has solar, permitted", roof age from the last re-roof permit or year built, and the largest hail at the house. Yards, Pest and Security: recent pool, fence, deck, addition and new-building permits, with filters. Four new city feeds (Denver, Aurora, Boulder, Longmont). Aurora's licence is share-alike; your call.
Every home, everywhere	FIXED All five editions have every Colorado home Sixfold has (1,093,827). Their town lists showed old counts for re-pulled towns (Castle Rock 7,082 instead of 19,531); recounted, and new towns can't go stale again.
Nightly backups	LIVE The five editions now get the same nightly copy as Sixfold (leads, customers, jobs, settings). Under 2 KB each today; no extra space needed.

Weather and speed 6

Alerts	LIVE One Colorado-wide call to the weather service feeds all six apps (it was about 1,000 calls at a time, which risked a block). Warnings are matched by their real shape, drawn on the maps and shown on the house they cover. Winter storm, blizzard, ice, high wind, wind advisory and extreme cold added everywhere.
Alert links	FIXED The "National Weather Service" link on every alert pointed to a site that no longer exists; it opens the warning now.
Radar	LIVE A Radar switch on the Doors map in every edition and Sixfold. It refreshes itself every 5 minutes, shows its time and plays the last hour. Sixfold field users get the Live radar tile too.
Wildfires	LIVE Searched around each app's own towns, not just 60 miles from Monument.
Speed	LIVE Your laptop is fine; the hotel Wi-Fi was slow. The app's towns list is now built ahead of time every hour and after each deploy, so nobody waits 7 to 16 seconds after midnight or a deploy, and the stats call skips towns with no marks. The home screen's large towns download is next.
Hail timing	QUEUED The "hail usually hits around 3 to 5 pm" line for every town runs on the cloud machine by itself after Group 3 and its storm history finish.

Traverse launch and website 3

First emails	HELD 15 small roofing companies are queued; the hold stops anything sending. All six emails now say 1.24 million Colorado homes, which is true once Group 3 lands.
Website	LIVE, PRIVATE Your wording across the homepage (storm list, roof material "where on record", new feature cards, import, three devices), pricing (every plan has every feature; an admin plus 1, 5, 12 or more people; one plan per company), the FAQ, editions and demo pages, and a new share picture. Still behind the site login and out of search.
Legal pages	LIVE, PRIVATE Terms of Use v2, Subscription Agreement v3 (PDF and Word redone), cancellation and privacy, all dated 29 October with no draft labels. The attorney approved all of them (your word, 29 Oct).

Sixfold 365 print and email 5

Sign-up sheet	DONE Sign-ups only, with the 365 badge: name, phone, email, ZIP code and a "Free quote" tick box, which is the consent. Englewood address. Team share rebuilt.
Concert ad	DONE Half page for the Voices Reunited holiday concert, in three versions (clean, our job photos, forest green). The QR goes to 365aeration.com and was checked on each one. Business and services only, no greetings.
Brandon + Jenn card	DONE A shared business card with Jenn's own email, J.McPherson@365Aeration.com. The QR was checked from the finished back. This is the one you're printing.
Concert QR page	LIVE 365aeration.com/concert/ counts scans. It isn't on the ad, because you chose the plain website.
Follow-up email	DRAFT 2-day and existing-customer versions for you and Jen. It will send from hello@365aeration.com, so Jen's contact@ stays untouched. Nothing sent.

Clients and your admin 3

Peak sponsor leads	DONE A 2-page PDF for Brandon on Lost Island and Hanson Hot Spring Spas: who runs them and their business contacts, with sources. I left out personal cell numbers and home addresses.
Apollo	Your free account is connected. The free plan only looks up companies; finding people takes the Apollo website or a paid plan. The key is stored outside the workspace.
Workspace	Door-list files can't be committed by accident any more. A 1.4 GB snapshot and an old cloud-machine folder were cleared on your go. Cloud uploads wait while you're on the phone hotspot.

Running tonight

Cloud machine	Group 3: lawn, trees, roof and sun for the 223 new towns. When it ends, the laptop uploads it by itself, once you're off the phone hotspot, then the storm history for those towns, then the hail timing for every town.
Towns list	Rebuilt ahead of time every hour, for all six apps.
Overnight check	Every 30 minutes, as usual.
Server backup	2:45 am, as every night.

Waiting on you 8

Launch	Say when to lift the email hold and open the site (after Group 3 lands, so 1.24 million is true).
Data licences	Aurora's permits are share-alike, and Boulder County's records say "developed solely for internal use". Keep or drop each.
Billing test	Optional: one Solo checkout on Solar with your card (about $2 lost to Stripe's fee after the refund).
Look into	Xweather, and HailTrace or Verisk, for paid hail data (on your list).
Follow-up email	Settle the wording with Jen, then add hello@365aeration.com with an app password. The footer needs a street address and an opt-out.
Lawns	Hand-measure the 10 lots on the list. Centennial's 8,881 doors need a re-measure on the cloud machine, when you say go.
County records	Ask Jefferson and Arapahoe for roof records, and decide on the 13 counties.
Apollo	Change the API key, since it was pasted in chat.

Saved on your Desktop in "End of Day Reports" and in the workspace's changelog/ folder, which is backed up. The running list of every day is CHANGELOG.md.
