Pull a plug. Grow a lawn.

Why it helps: On compacted ground, water and fertilizer run off before they reach the roots. The holes let them soak in where the grass needs them, and the plugs break down back into the lawn.

Sixfold 365
LAND · AERATION & SEEDING

How we do it

1. **Pull plugs**
   Our machine pulls small plugs of soil, about 2 to 3 inches deep, all over the lawn.
2. **Seed the holes**
   We overseed straight after, while the holes are open, with a root and soil conditioner.
3. **Feed it**
   Fertilizer goes down to help the new grass come in.
