END OF DAY

Friday 30 October 2026

Everything we changed today across the apps, sites and data

Traverse · Sixfold 365 · Launch · Your admin

132

Changes saved

Each one recorded in the change history

8

App deploys

Every one of the six installs, every upload checked, a backup taken before each

60

Prospect emails queued

30 roofers, 30 lawn companies, all held until you say go

9

Waiting on you

Listed at the bottom

Traverse editions: new 8

Properties	LIVE The five editions say "properties" instead of "doors" everywhere a rep reads it, in Spanish too; the knock itself ("at the door", "door-to-door") stays. Sixfold keeps doors and routes. The website, trades page, welcome page, privacy and terms of use say properties; the Subscription Agreement keeps its defined "Door Data".
Zero branding	LIVE A client company's staff and customers see only the company: invite, password and sign-in emails come from the company's name with replies to the company; the sign-in screen, browser tab and home-screen icon carry the company's name and mark. Billing still says Traverse, because they pay Traverse.
Plans	LIVE, OFF UNTIL SET Setup › Plans: what each visit includes, how often, season, price. A customer goes on a plan from their page or from a quote; next visits track themselves; "Plan visits to book" on the Jobs board; payment links by Square or Stripe. Nothing is ever charged automatically.
Customer emails	LIVE, OFF UNTIL SET Setup › Customer emails: up to five follow-ups after a quote, aftercare after a job, and a monthly newsletter. Every word editable, preview and test send, 8 am to 6 pm only, every issue approved one at a time. Nothing sends until a company turns it on and has connected its email.
Stats + end-of-day email	LIVE, OFF UNTIL SET A Stats page for the editions (leads by source, quotes, jobs, money in, Good/Better/Best, team, ad cost per lead) and an optional evening email to the owners in the company's colours. The example PDF is on your Desktop: "End of day report example.pdf".
Facebook leads	LIVE, OFF UNTIL SET Setup › Facebook leads: connect the Page, pick the forms, match the questions, choose who gets new leads. Checked every 5 minutes; a lead already in the Pipeline gets a note, not a copy. Until Meta approves a Traverse app, only you can connect a client's Page (TR-45).
Sync from another system	LIVE, OFF UNTIL SET Google Sheets or CSV links, HubSpot, Pipedrive, JobNimbus, ClickUp, Housecall Pro and HighLevel, plus a secret link for Zapier or Make. Read-only on their side, every run an import you can undo. Quote by phone is now a permission, not a role. Jobber, ServiceTitan, AccuLynx, Salesforce and Zoho need partner access (TR-46).
Radar	LIVE NOAA's 1 km MRMS radar drawn at the map's own zoom, so no more stretched blocks; fresh about every 2 minutes; "Play last 2 hours"; a colour key from light rain to hail likely; falls back to the old source if NOAA is down. Public domain, nothing paid.

Traverse editions: fixed 6

Your tablet test	LIVE Home groups start closed and remember your choice; a neighbourhood opens nothing by itself; the property card shows the lot photo first and the outcome buttons last; My stats territories have proper colours; My pipeline is Sixfold-only; JobNimbus sits behind a small Import / export button; House lookup has its own title; Setup opens at the top with the checklist next to Accounts; Back returns where you came from, including from the 19 Stats screens.
Office dashboard	LIVE The map is gone from the editions' dashboard, replaced by "Plan the properties" (the same answer lives on Home and in Plan). It opens in half a second instead of 5 on a phone. Sixfold keeps its map.
Sixfold leaks	FIXED Three places where Sixfold showed through in the editions: Roofing's Stats carried Sixfold's real Meta ad spend; Sixfold's "ClickUp and the app" box showed in every edition's Pipeline; Jen's, Brad's, Brandon's and SiteOne's names sat in every edition's page source. All gated or stripped; the build now refuses a page that names them.
Full button check	DONE 3,590 screen opens across five editions and Sixfold, four sizes, light and dark, five roles: no JavaScript errors, nothing clipped, every new screen clean. Its 15 findings are all fixed tonight: satellite photos that would have gone grey when an imagery ID expired, every trade's price units on every line, the update bar covering Back, no Setup from a desktop Home, hail buttons running together, two console errors.
Google Sheets	FIXED A pattern bug in the new sync meant a published Google Sheet link could never match. Found in testing before launch.
Nightly jobs	LIVE Plans, customer emails and end-of-day emails run hourly for every edition and client install; Facebook and CRM pulls ride the 5-minute job. Each was run once by hand tonight: every install reported off, nothing sent.

Sixfold 365 app 6

New movers	LIVE Houses sold in the last 12 months show on the property card and as a filter, as in the editions. 837,348 homes' sale records went up tonight (160 files, every checksum matched).
Roles and permissions	LIVE, OFF UNTIL SAVED A permissions editor for manager, office, quote and crew. Nothing changes until an admin saves it; until then every account behaves exactly as before, checked answer for answer against the old code.
Email sign-in	LIVE, PER PERSON From Profile: "Sign in with email instead of a code", with Forgot password. Codes keep working. Emails go out as Sixfold 365.
Agreement terms	LIVE Admins and super admins edit the seven lines on the sign form, with "back to the original wording". Signed forms keep what was signed. In the editions, editing terms is now admin-only too.
Other ways to pay	LIVE, OFF UNTIL SET Venmo, Cash App, PayPal and Zelle with a QR code, on the 365 sign page and the job card balance. Both 365 addresses updated.
Website leads	Counted from the app's data: 9 leads through the 365aeration.com form since 16 October, 3 of them with a job booked, 1 done ($814). You see 4 jobs in the scheduler; the fourth's lead was probably typed in under another source. Send me its date or town and I'll trace it.

Website and launch 7

Homepage	LIVE, PRIVATE "From the first point of contact"; the phone picture shows your parents' house on a public-domain aerial photo with the roof and a rough property line traced, figures labelled as samples; three contact cards (call, email, book a demo); the desk screenshot no longer says Doors.
Privacy policy	LIVE, PRIVATE How a connected mailbox is used (send only, never read; Google's Limited Use statement) and that uploaded price lists are read by Anthropic. Needed for Google's verification.
Agreement	APPROVED Plan names Solo / Team / Company, Company yearly $439, 25% founding discount, no setup-time promise, Lawn & Landscape. You approved it this morning.
Demo booking	LIVE 8 am to 8 pm every day; Tuesday to Friday from 9:30; Tuesday 4:30 to 6 pm off.
Email sign-in	LIVE Google and Outlook sign-in both tested from your app and both delivered a test email. The Traverse Google app is published, so sign-ins no longer expire weekly; your email assistant's Google app is published too. The sign-in opens a popup only inside the Home Base hub.
The push	HELD Your call tonight: push lawn and roofing together, small companies and start-ups first. 30 young roofers and 30 young lawn companies are queued with the map email, held until you say go. One roofing and one lawn test are in your Gmail. A lawn version of the email is drafted with a fact-check log; "JA-MAR" and "AP" style names now render right.
Review folder	DONE One Desktop folder, "Traverse review": 15 sets, about 500 images, re-shot with the new wording, one index page by topic.

Research and admin 6

Lawn sizes	DONE Our figure against DRCOG's and 20 hand measurements: ours misses by 25%, DRCOG by 38%, the average of the two by 22%. Not enough to switch the card yet; 8 to 10 more open lots would decide it.
Xweather	ANSWERED Every map tile is one access, so the free 15,000 a month is about 50 animated radar views across all clients: not for radar. The hail feed could fit if our server polled it only during warnings. Held; the new NOAA radar makes it unnecessary for now.
HailTrace	ANSWERED Its free plan is a contractor account on their site, not a data feed we can build in. Later idea: "connect your own HailTrace" per client, which needs partner access.
Register	DONE The Working Register is 12px, with nine finished items ticked and four new ones waiting on you (TR-45 to TR-48), plus tonight's TR-49 for the push. TASKS.md matches.
Usage	DONE Today's builders used about 6 million tokens, which is what burned the allowance. New standing rule: one or two builders at a time, the cheaper model for mechanical work, no needless test reruns. The cloud machine uses no Claude usage at all.
Security	DONE Seven Claude Check codes were rotated after one slipped into a terminal line this morning; the new ones live only in their file.

Running tonight

Cloud machine	Group 3's last stage, "hail hours" (when hail usually falls, per town and day). The homes and storm history are done.
Hourly	Towns list rebuilt; plans, customer emails and end-of-day emails checked for every install (all off); fuel prices weekly.
Every 5 minutes	Alerts, Facebook leads and CRM pulls for every edition and client install (nothing connected yet, so they exit at once).
Overnight check	Every 30 minutes, as usual. Server backup 2:45 am.

Waiting on you 9

Look at the folder	"Traverse review" on your Desktop, then tell me what to change.
"Open it"	Takes the site password off, opens checkout and search, lifts the email hold. Then: one demo booking test, one real checkout and refund, Google verification with the logo back.
Go for the emails	60 prospects are queued and held. Say go and they start in sending hours.
Counties (TR-47)	Which of the four fixes for the long county list: a "Yours" section, search, regions, hiding counties outside the service area.
Placement (TR-48)	Sample property into the Setup checklist? Payments on their own screen with a paid badge on each job?
Meta app (TR-45)	A Traverse Meta app and App Review so clients can connect their own Facebook Page. Steps are written up; needs the site open first.
Jobber (TR-46)	Register a Jobber developer app so clients can connect Jobber.
Lawn range box	Flip the DRCOG figure to show on open lots instead of tree lots?
Fourth website job	Its date or town, so I can trace the lead.

Full detail of every change: the workspace change history (git log) for 30 October, and CHANGELOG.md. This document: changelog/2026-10-30.html, with a copy in Desktop › End of Day Reports.
